Tactile Learning

As a **visual learner**, you learn best when information is presented in written form or visually through diagrams or pictures. You prefer to read the text book rather than listen to a lecture. A teacher who uses a lot of visual aids, such as notes on the board or handouts, will be easier for you to understand than one who just talks.

As an **auditory learner**, you learn best when you can hear the information such as teacher lectures and classroom discussions. You understand and remember things better if you hear them. You may understand better when you read out loud to yourself.

As a **tactile learner**, you learn best from hands-on experience where you can manipulate something in order to learn about it. The more you are able to touch and manipulate the information the easier it will be for you to learn. You learn by doing so you tend to learn better when some type of physical activity is involved.
